Summary

First-year B.Tech CSE (AIML) student with 8.9 CGPA and hands-on experience in building full stack web and mobile applications using Flutter, Firebase, and modern AI/ML tools. Developed multilingual applications with authentication, dashboards, real-time data, and AI-driven features. Strong in debugging, web deployment, and problem-solving with a passion for creating impactful digital solutions.

Farm to Factory – Flutter Application

Tech Stack: Flutter, Dart, Firebase, GitHub

- Developed a multilingual Flutter application supporting English, Hindi, Telugu, and Kannada.
- Built Farmer & Factory dashboards.
- Integrated Firebase Hosting for web deployment.
- Designed crop selling and market price tracking modules.
- Structured clean Flutter architecture with widgets, models, and screens.

Smart InCampus – Web Application

Tech Stack: HTML, CSS, JavaScript, JSON, LocalStorage, SVG, Chart.js

- Developed a role-based campus management platform with dashboards for Students, Teachers, Parents, and Administrators.
- Built an interactive campus navigation map with timetable, attendance, and event registration features.
- Designed an anonymous Q&A forum for student queries and complaint reporting.
- Implemented admin controls for user management, analytics, and system-wide updates.
- Structured a responsive, role-based UI across four distinct user types.

JanArogya – AI-Powered Health Management System

Tech Stack: Gemini API, Prophet (Meta), scikit-learn (IsolationForest), Flutter/Web, Firebase

- Built an AI-powered district health management system for 12 PHCs in Narasaraopet Division, Andhra Pradesh, replacing paper-based tracking with real-time digital visibility.
- Developed a mobile app for health workers to log daily metrics offline with multilingual (Telugu, Hindi, English) voice dictation support.
- Designed a live officer dashboard with colour-coded PHC status mapping and Gemini AI-generated crisis alerts and redistribution recommendations.
- Applied Prophet for medicine stockout and patient surge forecasting, and IsolationForest for doctor attendance anomaly detection.
- Automated a real crisis response — detected a 3-way PHC crisis (medicine shortage, doctor absence, patient surge) overnight and triggered a resolution via AI-generated WhatsApp alert, resolved before manual reporting occurred.
- Built at zero infrastructure cost using free-tier APIs and services.
